

## Fiche technique

**Technical datasheet No :** 2" SpinSecure Fuel Tank Lock  
**Product code :** 308 015

**Date :** 09/2019  
**Version :** original

**Page :** 1/1

### Designation

The SpinSecure Fuel Tank Lock is a patented locking device which fits to a standard 2" fill point inlet on an oil tank to secure the contents from a thief siphoning fuel away via its easiest access point. Utilizing patented Spinsecure technology, this oil tank locking cap freely spins when locked, like a medicine bottle, making it almost impossible to remove.

Often fuel tanks are secured using a padlock which can easily be broken, whereas the SpinSecure oil tank locking cap benefits from a free-spinning design that eliminates torque points so the lock cannot be forced.

A 2" Spinsecure Tank lock adaptor is available, which allows the lockable oil tank cap to be used on female threaded pipes.

### Application

Designed to fit the 2" fill point inlet on diesel, oil and heating oil storage tanks to protect the contents from theft.

### + Product

- For use on 2" male threads
- High security numbered lock with over 50,000 combinations
- Rubber gasket seal to prevent leaks
- Weatherproof / 'o'-ring sealed self-closing cover
- Comes complete with 3 keys
- Weatherproof / 'o'-ring sealed self-closing cover
- Integrated safety thermal relief

### Technical specifications

- Connection thread : G2" F BSP
- Material : Body - zinc alloy  
Seal - NBR

### Options / accessories

	Weight Kg	Part no.
2" M/M BSP Adaptor for SpinSecure Tank Lock	0,10	308 016

### Warranty

12 months provided fitting and operating instructions are observed.

	Weight Kg	Part no.
2" F BSP SpinSecure Tank Lock c/w 3 keys	0,50	308 015
